

A Leading Media Asset Management Company Achieved 30% Cost Savings with iLink Digital's FinOps Strategy

Industry:
Media

Company Size:
51-200 Employees

Headquarters:
California, United States

Overview

iLink Digital empowered the leading retailer to optimize resource utilization and control cloud costs efficiently. Our FinOps strategy enabled the client to achieve significant cost reductions and gain complete visibility of their cloud spend by facilitating deeper cost analysis and establishing robust governance strategies, ensuring greater operational efficiency and enhanced collaboration between engineering, business and finance teams.

Client background

Our client is a leading provider of media and broadcast management solutions, specializing in resource management and workflow automation for the media industry. With a strong vision of optimizing operational efficiency, they integrate various aspects of media, including scheduling, asset management, and billing, helping broadcasters navigate the complexities of modern media production.

Challenges

The client has encountered several challenges in monitoring and managing their cloud expenditure. The lack of visibility and oversight in cloud management usually prevents them from finding underutilized assets and from allocating resources as efficiently as possible, resulting in inefficiencies and unnecessary costs. Moreover, precise forecasting and budgeting are essential for navigating the complexities of fluctuating usage rates and diverse cost structures. Continuous optimization is critical to aligning expenses with evolving business objectives. These challenges have significantly impeded their business growth trajectory, adopting a more centralized and strategic approach to optimizing cloud investments and fostering innovation, eventually driving long-term business success.

Our Solution

Being a trusted Microsoft Azure partner with a proven track record of expertise, we worked together and implemented a FinOps strategy aimed at simplifying and continuously optimizing the client's cloud cost that aligned with the client's financial goals and budgets without compromising performance.

Our holistic approach is not just a blanket tactic but focuses on methodically reducing monthly cloud expenses in the Azure setup by addressing key areas of cost inefficiency, ensuring a more cost-effective resource utilization and greater business resiliency.

After an in-depth analysis of the client's cloud assets and resource consumption, we recommended our financial operations framework to improve governance, accountability, and insight. Our solutions transformed the client's cloud asset management capabilities in the following key areas:

- **A Direct Path to Cost Reduction Approach:** Working closely with client's teams, we identified cost optimization opportunities by analysing their cloud usage patterns and recommending resource optimization techniques.

- **Resource Optimization Techniques:** Strategically implemented various resource optimization techniques in the existing cloud environment, including right-sizing resources, preserving instances, and eliminating unused assets to reduce every dollar spent on the cloud without compromising performance.
- **FinOps Strategy Implementation:** Established robust governance frameworks and financial operations policies to monitor and manage cloud resources to avoid unnecessary costs, ensuring a new era of informed decision-making, precise budget allocation, and continuous cost optimization.

Business Impact

Dependency Analysis

- Conducted a dependency analysis on Azure resources to understand their importance and interconnectedness with other Azure services.
- Pinpointed essential elements and their links to ensure that any modifications avoided disrupting vital operations.

Leveraged dependency knowledge to plan and execute cost-saving initiatives thoughtfully, maximizing savings while

- minimizing risks.

Efficiency

Continuous Improvement: Ongoing Cost Efficiency

Once the cost-saving initiatives were successfully implemented, our team continued its proactive approach to ongoing cost efficiency and azure governance monthly. After the cost-cutting efforts were successfully executed, our team maintained a proactive approach to ongoing cost efficiency and Cloud governance monthly. This included doing frequent assessments and monitoring of the cloud environment to identify additional cost reduction opportunities while reviewing the efficiency of established optimizations. By rigorously monitoring cloud spending, we guaranteed that every dollar was justified, setting the groundwork for long-term financial stability and operational efficiency.

Conclusion

Through a strategic partnership with iLink Digital, the client not only achieved significant cost savings in cloud spend but also established robust governance to monitor, manage, and control cloud assets and consumption. By focusing on visibility, accountability, and continuous optimization, the organization was able to align its cloud expenditures with its business objectives effectively. Our FinOps strategy was implemented successfully, resulting in efficient cloud cost management. This made the customer more adaptable and resilient than before, allowing them to keep up with ever-changing market trends.
